## Access information behind text, email, and QR-code links without clicking, tapping, or scanning them

**Get on phone at SkipLink.net**

FOOTHILL RANCH, CA — Compromised links in text and email messages have become a major global problem because of what happens when these links and QR codes are clicked, tapped, or scanned. Because this problem has become so widespread, the FBI has warned people not to click on anything (see Forbes.com article entitled 'Most sophisticated Gmail attacks ever' dated Feb 9, 2025).

To eliminate this problem, StreamQuik™ is pleased to introduce SkipLink™, a simple no-app-required solution which enables companies and organizations to send link-free texts and email messages to recipients without requiring them to click, tap, or scan anything.

When a text or email sender sends a message with an embedded SkipLink code from StreamQuik and message recipients enter this code into SkipLink, SkipLink will then deliver message recipients to the sender's website. SkipLink users can then access the same message details (previously provided by clicking on links in the sender's message) from the message sender's website instead without clicking, tapping, or scanning anything in the sender's messages.

Because of the severity of the FBI's don't-click warning, companies and organizations are intensifying their efforts to "flag" incoming texts and emails containing links to avoid the risks and potential liability.

By sending link-free messages with embedded SkipLink codes, message senders can boost the chances of their messages being delivered (no links to filter) while giving recipients a way to access sender's information even without opening their emails—ideal for those who are averse to using email.

In addition to being used to avoid links, SkipLink can also benefit marketers and advertisers when they use SkipLink codes in their campaigns like this: "For more information about our offer, visit SkipLink.net with your browser and enter 123456 (example SkipLink code)." When people enter these codes, they get delivered to marketer/advertiser web sites where they can feature whatever content they want.

SkipLink can be acquired on people's phones and desktops by simply entering 'SkipLink.net' into their mobile and desktop browsers—no subscription, link, opt-in, QR-code scan, or login/password needed.

To start a SkipLink program within your company or organization, email StreamQuik above.
